An **Examiner's Amendment** to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with James A Fox on March 24, 2004.

Examiner's Amendments to the Claims:

Claim 88 has been amended as follows:

88. (Currently amended) An isolated polynucleotide encoding at least a first monomer of a non-oligomerizing tandem fluorescent protein, wherein the non-oligomerizing tandem fluorescent protein comprises a first monomer of an *Aequorea* green fluorescent protein (GFP) or a fluorescent protein related to an *Aequorea* GFP operatively linked to at least a second monomer of an *Aequorea* GFP or a fluorescent protein related to an *Aequorea* GFP, and wherein said first monomer of the non-oligomerizing tandem fluorescent protein comprises a mutation of an amino acid residue corresponding to A206K, L221K, F223R, or a combination thereof of SEQ ID NO: 6 or SEQ ID NO: 10, wherein the numbering of the amino acid residues conforms to that in native *Aequorea* GFP (SEQ ID NO: 2), and wherein the propensity of the tandem fluorescent protein to form intermolecular oligomers is reduced or inhibited as compared to a monomer of an *Aequorea* GFP or a fluorescent protein related to an *Aequorea* GFP.

The following is an **Examiner's Statement of Reasons for Allowance**: The following reference appears to be the closest art to the claimed invention. Tsien *et al.* (U. S. Patent 6,140,132, filed June 1998) disclose the nucleotide and amino acid sequences of GFP variants from *Aequorea victoria*, e.g., EYFP-V68L/Q69K and ECFP mutant, however, the reference does not teach an isolated polynucleotide encoding at least a first monomer of a non-oligomerizing tandem fluorescent protein, wherein the first monomer of the non-oligomerizing tandem fluorescent protein comprises a mutation of an amino acid residue corresponding to A206K, L221K, F223R, or a combination thereof of SEQ ID NO: 6 or SEQ ID NO: 10, wherein the numbering of the amino acid residues conforms to that in native *Aequorea* GFP (SEQ ID NO: 2). Therefore, the claims are allowable over the art of record. Regarding the numbering of A206K, L221K, F223R in the SEQ ID NO:6 or 10, the amino acid residues are numbered with the first serine as amino acid number 2 even if a valine has been inserted after methionine number 1 and before the first serine so that the numbering of the amino acid residues conforms to that

in native *Aequorea* GFP (SEQ ID NO: 2) as indicated in the paragraph [61] of the specification (page 24, lines 3-6).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
